Community Preparedness for Sustained & Inclusive SRH in Emergency Settings

	Input ⇨	Process ⇨	Output ⇨	Effect ⇨	Impact
RESULTS	• CCNA tools • KII and FGD participants • CCNA report • Facilitator's kit • Community preparedness workshop participants • Staff time	• CCNA training • Data collection • Data co-analysis • Validation workshop • Community workshop • Action plan development • Technical support provision	• SRHR capacities and needs are identified for marginalized and vulnerable populations (MVPs) • Community workshops are tailored and specific to the needs, resources, and priorities of the community • Increased awareness and understanding of key stake-holders, including communities on importance of MISP for SRH preparedness in disaster settings • Communities developed action plans inclusive of MVPs to address SRHR	• Improved policies inclusive of MVPs • Number and type of implemented tailored approaches for SRHR preparedness and response • Increased stakeholder's coordination and participation to address SRHR in crisis settings of MVPs • Communities prone to humanitar-ian crisis, including natural disasters and the effects of protracted conflicts, are better prepared for SRH response and recovery.	Improved and sustained SRH in crisis prone settings including: • Reduced maternal morbidity and mortality rate • Reduced prevalence of STIs including HIV • Increased continuation of ARVs for people already on ARVs • Reduced prevalence of GBV • Increased numbers of survivors of sexual violence receiving health care in less than 72 hours • Reduced newborn morbidity and mortality • Reduced unintended pregnancy rate • Reduced unsafe abortion
INDICATORS	• Number and type of CCNA tools developed • Number and type of training kits/manuals developed	• Number and type of training conducted • Number and type of enumerators and supervisors trained • Number and type of CCNA participants • Number and type of data co-analysis workshop participants • Number and type of community preparedness workshops for SRH & gender participants	• Number and types of community SRH capacities, needs and gaps identified • Number and types of community action plans developed to address SRHR of marginalized populations • Percent of workshop participants demonstrating increased knowledge of MISP for SRH • Percent of workshop participants demonstrating increased knowl-edge in community preparedness for SRH and gender	• Number and types of marginal-ized populations engaged in local DRR and management plans • Number and type of community actions implemented by community inclusive of MVPs for preparedness and response • Percentage of community mem-bers, including MVPs, using SRH services during crisis settings. • Policies are inclusive of MVPs	• Maternal mortality and morbidity rate • Newborn morbidity and mortality rate • HIV Prevalence disaggregated by MVPs • STI prevalence rate disaggregat-ed by MVPs • Unintended pregnancy rate • Unsafe abortion rate • ARV continuation rate
VERIFICATION	• CCNA tools • Training manual	• Attendance sheet of FGD and KII • CCNA report • Training reports • Community preparedness workshop reports	• CCNA report • Workshops reports • Action plan matrix • Reports including monitoring visit	• Pre-test and post-test at workshop • Regular and periodic reports • Reports of monitoring visit • Community action plans monitoring and evaluation report • Evaluation report	• Annual Health Report, DoHS • Situational Assessment Report by HEOC or UNFPA & others • Nepal Demographic and health Survey

KEY: Items in red - to be implemented in phase one. Items in purple - to be implemented in phase two. Items in black - Impact.
